

Frequently Asked Questions

1. What is TestWiz?

TestWiz is software to help you analyze your school system's test data. You can easily view data by student, class, school, district, or even multiple districts. You can disaggregate the information by cut scores or demographics, or both. You can track student and group progress over time. You can look at multiple assessments on one page. The best way to see how it works is to sign up for an online demonstration.

2. What kind of test data can I manage?

You can use TestWiz to report on virtually any standardized test, state assessment, or formative assessment.

3. What advantages does the software offer over the reports I get from the State?

Unlike the static state reports, you control the elements that get reported. The software can help you identify students in need of intervention and program areas that are in need of professional development. The student database makes it possible and easy to track progress over time.

4. Where does the software reside?

We offer a PC-installed version called TestWiz Classic and a web-based version called TestWiz.Net. TestWiz Classic is installed on a network or local machine. TestWiz.Net resides on dataMetrics' secure servers and is accessible through the Internet.

5. What kind of reports can I create?

There are over 40 report templates - ranging from student and item details to graphical summaries. View Sample Reports to see a few of the reports. Reports are easily customized to answer questions like:

- How did my Special Ed students perform in Math?
- How did they perform compared with my non-Special Ed students?
- Who are the students who have not met proficiency?
- How did my students do compared with the state item by item (assuming the state test has released items)?
- Has my school's overall performance improved over last year?
- How have the students performed who were in my district for several test cycles?
- How did students who did not meet proficiency on the State test do compared with my local assessment?

6. How do I get more information?
